EVALUATING LAND USE LAND COVER UNCERTAINTY USING SWAT2009_LUC TOOL

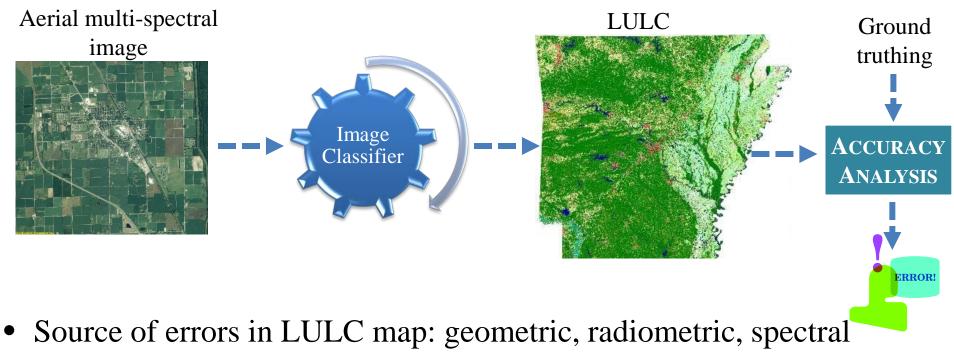

Dharmendra Saraswat, Ph.D. Naresh Pai, Ph.D. Department of Biological & Agricultural Engineering University of Arkansas, U.S.A.

Presented at:

2012 International SWAT Conference & Workshops, New Delhi, India July 19, 2012

LULC MAP PRODUCTION 101

mixing,...*

- Accuracy varies based on LULC category[^]
- Broad accuracy range: 75% to 95% depending on category

DIVISION OF AGRICULTURE RESEARCH & EXTENSION University of Arkansas System (*Jensen, 1996; ^Congalton, 1991) (Image sources: CAST, Landsat)

LULC ERRORS

Why do we care about LULC categorical errors?

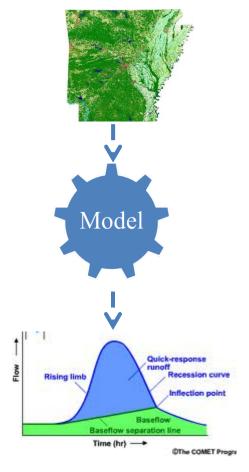

• Input errors = Output errors

ISION OF AGRICULTURE

University of Arkansas System

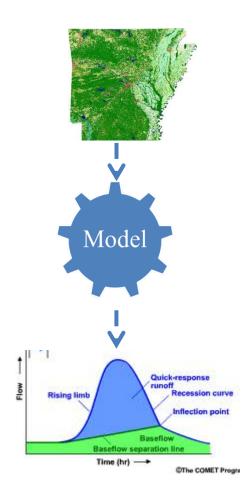

& EXTENSION

- LULC: important SWAT input
- Processes governing hydrologic responses are sensitive to land cover¹
- Small LULC errors can have substantial effect on watershed model output²

[1] Singh and Frevert, 2006; Singh and Woolheiser, 2002 [2] Stuebe and Johnston, 1990; Endreny et al., 2003; Miller et al. 2007

- KINEROS2: -83% to 664% deviation in runoff volume due to LULC misclassification¹
- HSPF: -35% to 20% deviation in peak flows based on LULC source²
- **SWAT**: unknown??
- Even if known, can we extrapolate to all watersheds?

[1] Miller et al. (2007)[2] Endreny et al. (2003)

LULC ERRORS

How do we handle LULC errors?

Minimize Errors¹

- ✤ Radiometric corrections
- ✤ Geometric corrections
- Improved classification techniques
- ✤ More ground samples

DIVISION OF AGRICULTURE RESEARCH & EXTENSION

University of Arkansas System

Propagate Errors²

- Develop LULC realizations
- Integrate in SWAT model
- Evaluate sensitivity to LULC error
 Incorporate in decision-making

FOCUS OF THIS STUDY

Propagating LULC categorical errors through the SWAT model

[1] Jensen (1996), Alfieri et al. (2007)[2] Endreny et al. (2003), Miller et al. (2007)

TOOL DEVELOPMENT

- Error propagation results complex and specific to a watershed, land-use layer, and output
- How do we empower other modelers to conduct uncertainty analysis?
- Unify uncertainty techniques into existing modeling framework¹
- Develop automated tools that facilitate uncertainty analysis²

[1] For e.g., Harmel et al. (2010)
 [2] Brown and Heuvelink (2007)

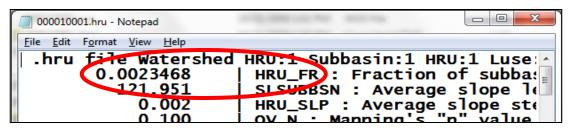

Develop an automated tool to integrate LULC realizations in the SWAT model

Evaluate sensitivity of SWAT output to LULC categorical errors

LUU MODULE CONCEPT

- **HRU**: unique combination of land use, soil, and slope within a subbasin
- Fractional coverage of an existing HRU is represented by HRU_FR variable in *.hru files

• LUU module operates by updating HRU_FR variable as many times as the number of temporal land use data layers require[#]

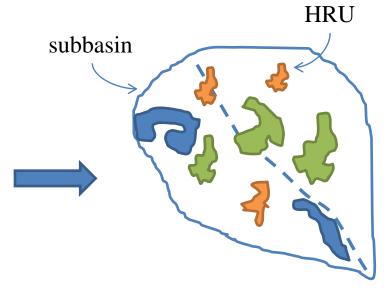

(#Pai and Saraswat, 2011)

UNCERTAINTY ANALYSIS ALGORITHM

Auto-correlation maintained within subwatersheds

GUI developed to:

- 1. Interact with SWAT project
- 2. Ingest: LULC layer, categorical errors
- 3. Develops realization and LUU files
- 4. Runs SWAT with alternative LULC realizations

SWAT2009 Land-Use Cha	inge (SWAT2009_LUC) Tool	
	Step 1: Select SWAT Project	
LUU Module Files	Categorical Uncertainty	
Step 2: Number of LULC layers Num. LULC? Step 3: Upload LULC - Provide LULC Lookup	Step 2: Upload LULC - Provide LULC Lookup Upload LULC Lookup LULC date:

Step 3: Enter categorical errors Help JULC Error - Realizations 23 Select percentage error and number of realizations for each LULC and press continue Error (%) # Realizations Category 11 **v** 0 0 13 0 - 0 41 0 - 0 100 0 - 0 201 0 ÷ 0 209 0 210 0 - 0 Status

- Enter percentage error for each category and number of realizations that SWAT should simulate
- Error range divided uniformly by realizations

RESEARCH & EXTENSION

University of Arkansas System

For e.g. error \pm 8%, realizations 2

- Step 4: Process LULC realizations
- Tool reads HRU layer
- If HRU thresholds applied, creates a post-threshold HRU layer*
- Based on LULC realizations, creates HRU realizations
- Finally, creates LUU module files for each realization that can be consumed by SWAT

 Of A RESEARCH & EXTENSION

University of Arkansas System

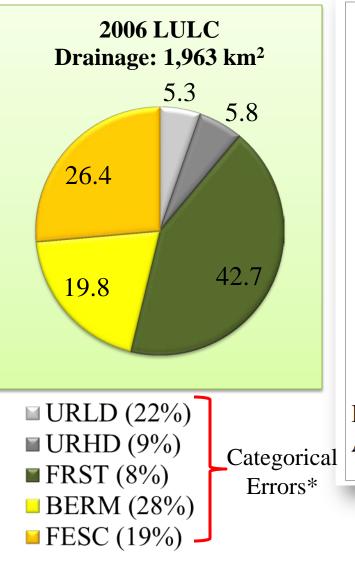

(*Pai and Saraswat, 2011)

Develop an automated to for integrate LULC realization in 'SWAT model

Evaluate sensitivity of SWAT output to LULC categorical errors

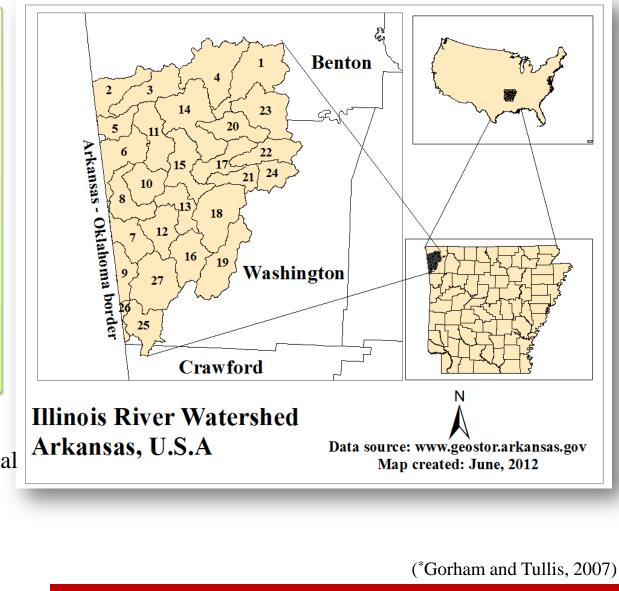

STUDY AREA

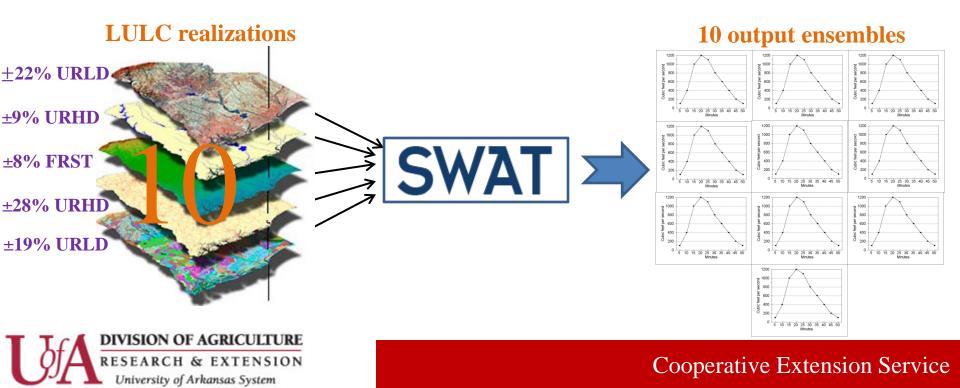

DIVISION OF AGRICULTURE RESEARCH & EXTENSION

University of Arkansas System

SCENARIO ANALYSIS

- Study period: 2000 2006
- Warm-up: 2000 2003
- Temporal scale: Annual and monthly (three seasonal)
- Spatial scale: subwatersheds
- Output: Water yield (mm)

UNCERTAINTY EVALUATION- ANNUAL

VISION OF AGRICULTURE

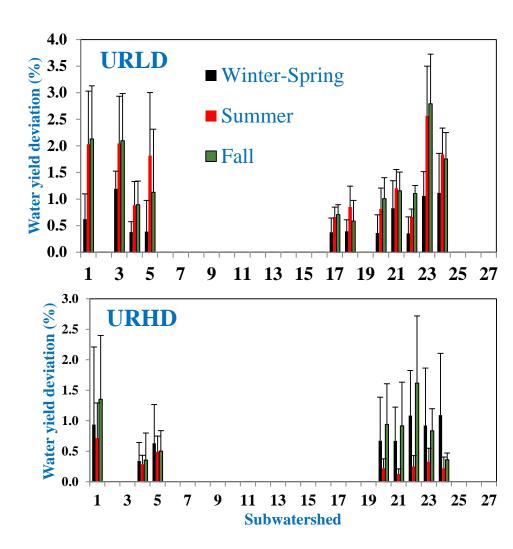

University of Arkansas System

& EXTENSION

Annual percentage deviation in 10 ensemble 4.0 **%** 3.5 outputs vary based on land-use Water vield deviation 3.0 2.5 URLD (0% - 1.6%), URHD (0.0 – 0.2%), FRST 2.0 1.5 (0.7% - 3.2%), BERM (0.2% - 8.0%), FESC 1.0 (0.3% - 2.8%)0.5 TRST 0.0 12 15 What criteria impacts LULC categorical FRST acreage difference (%) uncertainty in a subwatershed? 9.0 8.0 **5**7.0 **Answer**: 1. LULC type, 5.0 2. percentage acreage of LULC ₹ 3.0 subwatershed, $\overline{2}2.0$ 3. percentage misclassification error **BERM** 0.0 15 30 10 20 0 25 **BERM** acreage difference (%)

UNCERTAINTY EVALUATION- MONTHLY

- Monthly output varies from 0% to 19.9%
- Demonstrates higher sensitivity at monthly scale
- Seasonal differences in sensitivity to LULC errors
- E.g. summer and fall seasons show greater variation for URLD while winter-spring and fall show greater variation for URHD

(Winter-spring: January – June, Summer: July – September, Fall: October - December)

- ✓ Objective 1: A desktop-based tool was developed to conduct LULC categorical uncertainty in SWAT
- ✓ Objective 2: SWAT sensitive to LULC errors but sensitivity varies based on (a) land-use, (b) LULC acreage in subwatershed, and (c) LULC misclassification error
- ✓ Tool useful for modelers wanting to evaluate impact of LULC categorical error uncertainty in ANY watershed
