					Clin	nate	
CIA/AT Imment				Land Use			
SWAI Input		S	oil				
	Ter	rain					
Scale	Geological	Centuries	Decades	Years	Days	Hours	

- Impact on Calibration/Validation once a model is calibrated for several years?
- Impact on projections? What if I want information on a shifting process projected by a single future scenario
- What if I would like to use the model for scenario optimization effected by land use dynamics? (e.g. using a Pareto optimum)

SWAT & LUC LUPSA Test Case &

Introduction

Conclusions & Prospects

LUPSA app.

SWAT and Land Use Change - the lup.dat file

Introduction

SWAT & LUC

LUPSA

Test Case & LUPSA app.

Conclusions & Prospects lup.dat:
- optional SWAT input file

- HRU fraction update during simulation
- Covers only existing HRUs
- Manually very time consuming for larger models

- → A 10y simulation for a 500 HRU test case with monthly updates means 120 update files with max. 60,000 update fractions
- → What if new land uses shall be introduced? How to update/include not existing HRUs

LUPSA - Land Use Update and Slope Adjustment

UP!

2006

UP!

2007

2008

2009

2010

Introduction

Interpolates HRUs of different SWAT setups based on different land use inputs

UP!

2005

e.g.:

Input A 2000

HRU:

|--|

LUPSA

Test Case & LUPSA app.

Conclusions & Prospects

Simulation Period Accounts also for HRUs unique in only one setup

UP!

2004

Additionally updates HRU slopes

UP!

2003

Why Slope Change Implementation?

UP!

2002

2001

HRU 1 = Fraction: 0.06 Slope: 18%

HRU 2 =Fraction: 0.07 **Slope: 25**%

LUPSA Process:

- 1. HRU identification, fraction and slope extraction, renaming/rewriting
- 2. lup.dat and update file generation \rightarrow fraction and slope linear interpolation
- 3. Checking + adjusting total subcatchment HRU fractions

For One Subbasin (e.g. subbasin 1 as it is here)							
Attribute	Scenario 1				New Scn		
	<u>HRU</u>	frc1 array	<u>slp1 array</u>	<u>slp2 array</u>	frc2 array	<u>HRU</u>	HRU
match	000010001	frc1	slp1	slp2	frc2	000010001	000010001
uniqe in 1	000010002	frc1	slp1	slp1	0.0000007	-	000010002
match	000010003	frc1	slp1	slp2	frc2	000010002	000010003
match	000010004	frc1	slp1	slp2	frc2	000010004	000010004
uniqe in 1	000010005	frc1	slp1	slp1	0.0000007	-	000010005
match	000010018 (last scn1)	frc1	slp1	slp2	frc2	000010015	000010018
uniqe in 2	-	0.0000007	slp2	slp2	frc2	000010003	000010019
uniqe in 2	-	0.0000007	slp2	slp2	frc2	000010016	000010020
				•••			

Example:

2 setups based on 2 LU inputs but one parameterisation

Common HRUs = 286 Unique HRUs 1 = 56 Unique HRUs 2 = 94 Unique HRUs: 34%

Introduction SWAT & LUC LUPSA Test Case & LUPSA app.

Conclusions & Prospects

Conclusions

Achievements:

- 1. An automated lup.dat generation helps the implementation of LUC in SWAT
- 2. To fully address LUC in SWAT, arising HRUs (due to LUC) should be addressed
- 3. Land use change might have a considerable impact (case dependent) on the hydrology also within decades

Prospective

- 1. Applying the tool in European Russia on agricultural production
- 2. Checking the impact of dynamic LUC implementation on the calibration of the new model

Conclusions

& Prospects

Another tool was developed by at the University of Arkansas which uses another approach of setting up the luc.dat file (SWAT2009_LUC) Advantage: Setup directly based on land use input grid

Disadvantage:

- accounting only for matching HRUs
- no slope change implemented
- Abrupt updates on the dates of the input grids which may causes problems with the amount of water an nutrients in the HRU storages

Other works:

A on going research about the impact of land use change on the model calibration at the UNESCO-IHE applying both tools supervised by Ann van Griensven Leibniz Institute of Agricultural Development in Central and Eastern Europe
