2014 International SWAT Conference Porto de Galinhas - PE

INTRODUCTION

- Tropical soils have peculiar hydrological characteristics

For example:

Oxisols → high amounts of clay → high permeability

2014 International SWAT Conference Porto de Galinhas - PE

INTRODUCTION

- Reduce inputs uncertainties improving the models physical basis

This is important for:

- ➔ Cenarious studies
- ➔ Climate change studies
- ➔ Studies on unggaged basins

2014 International SWAT Conference Porto de Galinhas - PE

INTRODUCTION

- The purpose of this study was to analyze the influence of the soil database on streamflow simulation using SWAT model in a predominantly agricultural river basin.

2014 International SWAT Conference Porto de Galinhas - PE

STUDY AREA

Pipiripau river basin

- An experimental rural catchment of the Brazilian savanna (Cerrado biome)
- 90% in the northeast of the Federal District
- Its upper part is in the State of Goias
- 235km² drainage area
- The climate is typical for the Brazilian Central Plateau region
 - ➔ rainy season from October to April
 - ➔ dry weather from May to September

MODEL SETUP AND EVALUATION

- 2 soil database were tested in order to analyze the influence of the soil database on streamflow simulation with SWAT model in Pipiripau's river basin

→ SDB1: Lima *et al.* (2013)

→ SDB2: Baldissera (2005)

2014 International SWAT Conference Porto de Galinhas - PE

MODEL SETUP AND EVALUATION

- The evaluation was performed using a 10 years record of streamflow historical data (1989-1998)
- Monthly and daily basis
- The analysis was made without calibration using only SWATs first simulation.

2014 International SWAT Conference Porto de Galinhas - PE

MODEL SETUP AND EVALUATION

- Accuracy quantification and the criteria used for evaluation of SWAT's streamflow simulation were made by ASCE (1993) and Moriasi et al. (2007) methods.
- Visual analysis and statistical evaluation
 - ➔ Hydroghps
 - ➔ Percent bias (PBIAS)
 - ➔ Nash and Sutcliffe Efficiency (NSE)
 - ➔ Adapted Nash and Sutcliffe Efficiency (ANSE)

2014 International SWAT Conference Porto de Galinhas - PE

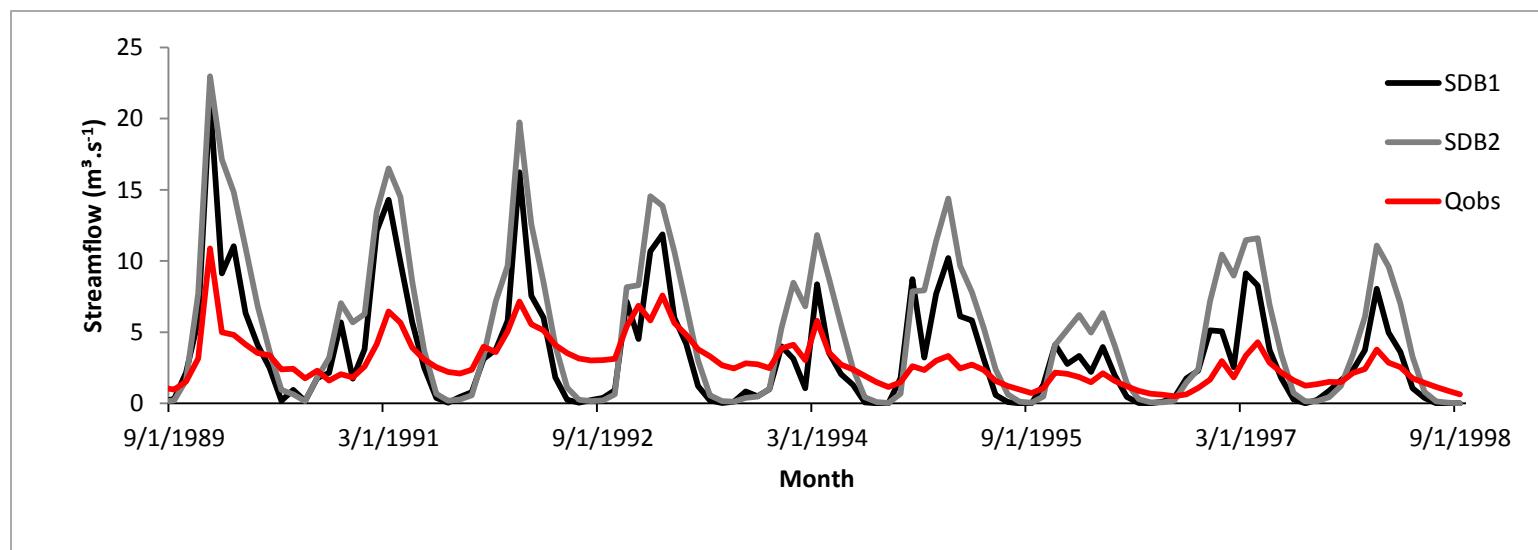

MODEL SETUP AND EVALUATION

- General performance ratings for recommended statistics

Performance rating	NSE	ANSE	PBIAS (%)
Very good	$0,75 < \text{NSE} \leq 1,00$	$0,75 < \text{ANSE} \leq 1,00$	$\text{PBIAS} < \pm 10$
Good	$0,65 < \text{NSE} \leq 0,75$	$0,65 < \text{ANSE} \leq 0,75$	$\pm 1 \leq \text{PBIAS} \leq \pm 15$
Satisfactory	$0,50 < \text{NSE} \leq 0,60$	$0,50 < \text{ANSE} \leq 0,60$	$\pm 15 \leq \text{PBIAS} \leq \pm 25$
Unsatisfactory	$\text{NSE} \leq 0,50$	$\text{ANSE} \leq 0,50$	$\text{PBIAS} \geq \pm 25$

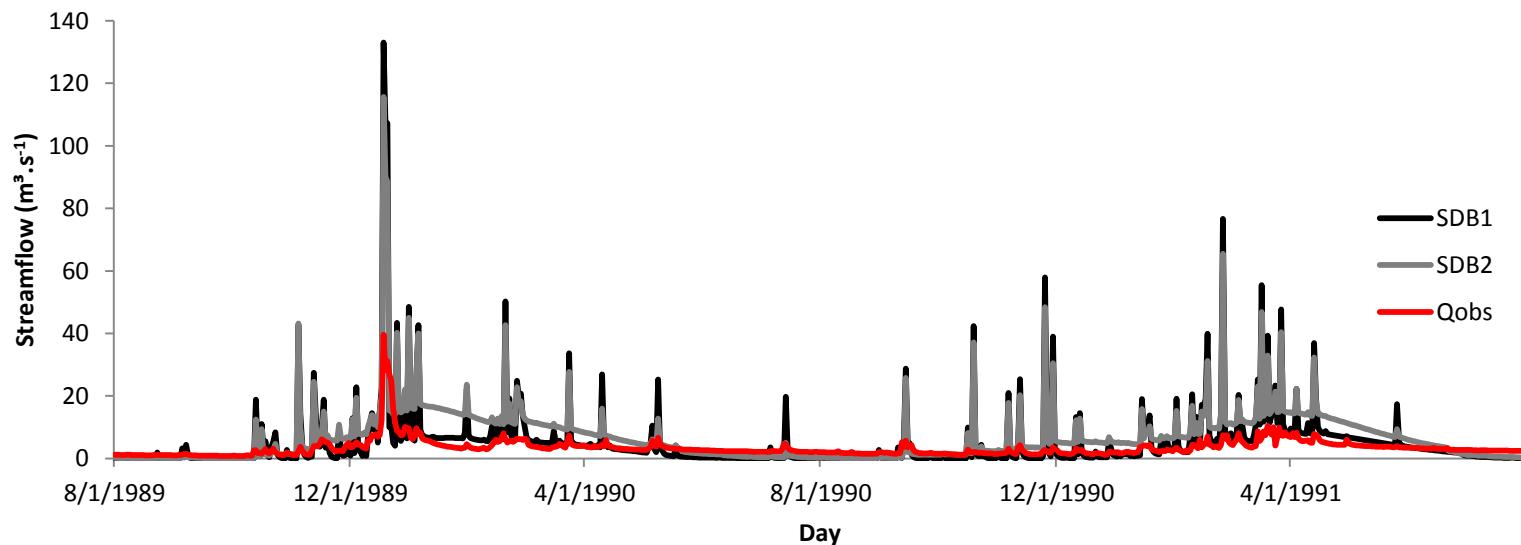

RESULTS AND DISCUSSION

- Visual comparison between observed streamflow data and monthly streamflow simulation, using SDB1 and SDB2

RESULTS AND DISCUSSION

- Visual comparison between observed streamflow data and daily streamflow simulation, using SDB1 and SDB2
 - Sample of the results

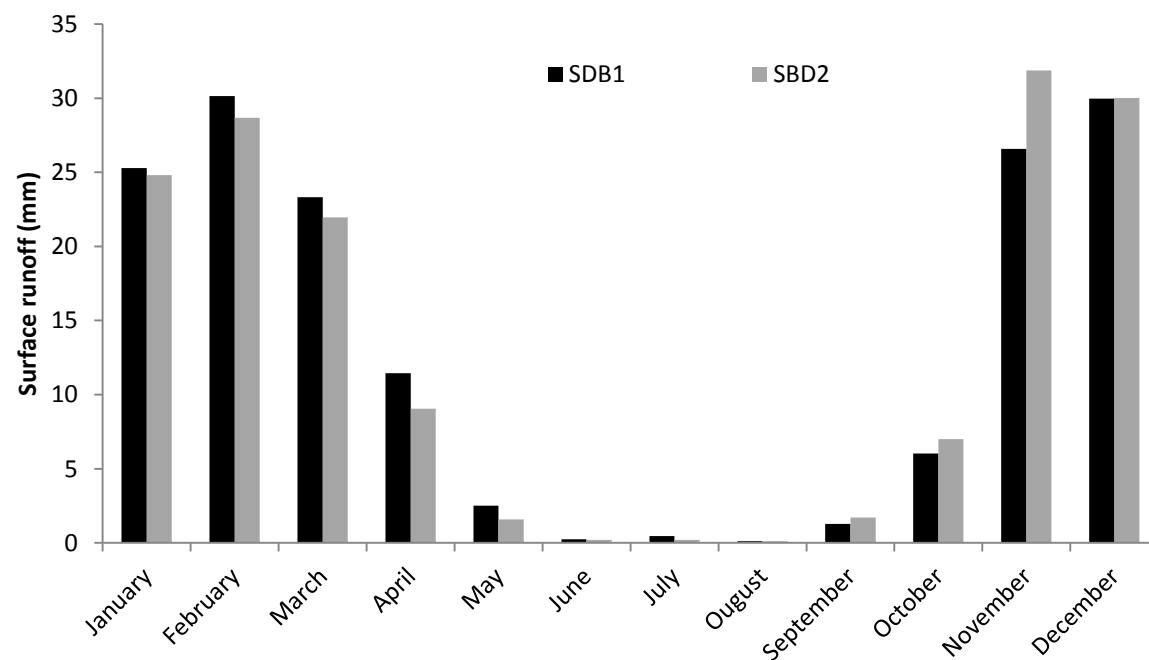

2014 International SWAT Conference Porto de Galinhas - PE

CONCLUSION

The study indicates the importance of developing soil databases for specific regions throughout Brazil and furthermore research on other parameters in order to improve physical basis on SWATs simulation.

2014 International SWAT Conference Porto de Galinhas - PE

CONCLUSION

Continue improving SWAT model Physical basis
for the Cerrado region:

- ➔ Parameters and conceptual model
- ➔ Cenarious Land use/Climate Change

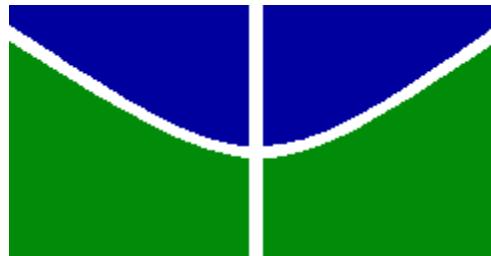

2014 International SWAT Conference Porto de Galinhas - PE
